Module `mfn_keras`

Functions

Function `load_data`

```
def load_data(
    data_path
)
```

This function is used to load data which follows the python dict format as speceified according to CMU mmsdk.

Args —–= `data_path` : path to the pickle file which contains the required data.

Returns —–= X : a list of numpy arrays for each modality

y the output in a one-hot encoded representation
